SUMMARY

MCA student specializing in **Full Stack Developer and Machine Learning Engineer**, with strong expertise in building intelligent, scalable systems. Designed and developed DeepVeritas, an advanced multimodal misinformation detection platform integrating transformer-based NLP (DistilBERT) and CNN-based Computer Vision (ResNet-18) with a custom fusion algorithm for enhanced accuracy. Experienced in developing secure, end-to-end applications with authentication, database management, and optimized inference pipelines using modern frameworks like PyTorch and Streamlit. Demonstrates strong problem-solving ability, system design thinking, and a focus on building real-world, high-performance solutions.

SKILLS

Programming Languages:

- JavaScript, Python, Java, C

Web Development:

- HTML5, CSS3, React.js, Node.js, RESTful API, Authentication (JWT / bcrypt)

AI / Machine Learning:

- NLP, CNN, DistilBERT, Deep Learning (PyTorch, Torchvision)
- Machine learning, Model fine tuning, LLMops, Feature Engineering, Supervised & Unsupervised Learning

Database Management:

- MongoDB, SQLite

Tools & Technologies:

- GitHub, VS Code, MySQL, Hugging Face Transformers

Office Productivity Tools:

- Microsoft Word, Microsoft Excel, Microsoft PowerPoint

PROJECTS

DeepVeritas | Python, PyTorch, Streamlit

- Engineered a multimodal misinformation detection system integrating NLP (DistilBERT) and Computer Vision (ResNet-18)
- Designed and implemented a custom **late fusion algorithm** to combine text and image predictions
- Built an end-to-end machine learning pipeline from data processing to real-time inference
- Optimized inference pipeline achieving ~3–5 seconds response time

College Management System | React, Node.js

- Engineered a full-stack application to manage student, faculty, and course data
- Designed RESTful APIs and implemented authentication and database integration
- Improved data handling efficiency and system performance

Simple Chat AI (ChatGPT-like) | Python, LLaMA (llama-cpp-python)

- Developed a basic conversational AI system using NLP techniques
- Implemented user interaction flow and response generation logic

EXPERIENCE

AI & Full-Stack Developer | Academic Projects | 2025 – 2026

- Architected and engineered Fake News Detection (**DeepVeritas**), a multimodal AI system using transformer and CNN models
- Engineered scalable backend systems and integrated machine learning models with web interfaces
- Developed secure applications with authentication, API development, and database management
- Optimized system performance and improved response time for real-time applications
- Applied modular architecture and version control (Git) for maintainability and collaboration

CERTIFICATION

- Artificial Intelligence – Udemy (Mar 2025)
- Web Development – Ediglobe / Kshitij IIT Kharagpur (Feb 2025)
- Web Development – Internshala (Aug 2021)

EDUCATION

- **MCA** – Galgotias University | CGPA: 7.0 | Expected 2026
- **BCA** – University of Lucknow | 57.7% | 2022
- **12th** – Shaheed Inter College | 55% | 2019
- **10th** – Shaheed Inter College | 73.3% | 2017
